Professional Summary

Motivated and detail-oriented Computer Engineering graduate with hands-on experience in full-stack software development, machine learning systems, mobile application integration, and cybersecurity. Skilled in building scalable web applications, secure backend APIs, AI-powered solutions, and conducting vulnerability assessments. Currently working as a Full Stack Software Engineer contributing to real-world production AI products with strong debugging, deployment, and collaboration capabilities.

Technical Skills

Programming Languages: C, C++, Java, Python, JavaScript, HTML, CSS

Frameworks & Libraries: React.js, Next.js, FastAPI, Flutter, TensorFlow

Database & Tools: MySQL, Prisma, Git, REST APIs, PHP

Cybersecurity: Vulnerability Assessment, Penetration Testing, Information Security, CWE Analysis

Machine Learning: NLP, Naive Bayes, Reinforcement Learning (DQN), TF-IDF

Soft Skills: Communication, Teamwork, Debugging, Requirement Analysis, Adaptability

Work Experience

Software Engineer (Full-time)

Singularity Technologies

June 2025 – Present

Mumbai, India

- Transitioned to full-time after internship based on strong technical performance and consistent project contributions across multiple company products.
- Working on **OutCallerAI**, contributing to end-to-end full-stack feature development across frontend and backend modules.
- Implementing scalable functionalities, API integrations, workflow optimization, and UI/UX enhancements for production-ready applications.
- Collaborating with cross-functional teams on debugging, feature enhancements, and performance improvements.
- Solely architected and developed an upcoming **Attendance & Leave Management System (PWA)** for internal workforce operations.
- Built secure role-based dashboards for Directors, HR, and Employees with authentication protection and workflow-specific access controls.
- Implemented geo-location based employee check-in/check-out, attendance audits, leave approval lifecycle, and HR reporting modules.
- Handled end-to-end development including requirement analysis, Prisma schema design, API integrations, frontend UI development, testing, debugging, and deployment readiness.
- Developed the platform as an installable Progressive Web App (PWA) for seamless mobile and desktop accessibility.

Software Developer Intern

Singularity Technologies

Aug 2024 – Jan 2025

Mumbai, India

- Contributed to frontend development for multiple internal and client projects in agile environment.
- Built and improved frontend modules for **OutRiskAI**.
- Performed penetration testing and prepared VAPT security reports for **Hiranandani Security Assessment Project**.
- Led frontend design and implementation for company website development.
- Gained practical exposure to modern frameworks, deployment practices, and collaborative software workflows.

Personal Product

Widget – AI Marketing & Customer Engagement Assistant

- Built an AI-powered customer engagement platform capable of understanding requests, retrieving live business data, executing actions through APIs, and escalating conversations to human agents when required.
- Developed omnichannel support across Website, WhatsApp, Instagram, Facebook Messenger, Slack, and Microsoft Teams through a unified inbox.
- Implemented AI actions including appointment booking, order tracking, CRM updates, payment link generation, lead capture, and custom workflow automation using REST APIs.
- Designed a secure Action Engine with role-based permissions, audit logging, identity verification, and Human Takeover with complete conversation context.
- Engineered the platform with scalable architecture focused on conversational AI, workflow automation, enterprise integrations, and production-ready customer support.

Academic Projects

IoT-Based Data Logging System Using Cloud

- Developed a real-time IoT platform to collect sensor data and store it on Supabase Cloud using Next.js, Tailwind CSS, Wi-Fi, and MQTT communication.

Restaurant Website Development

- Built a responsive restaurant website using HTML, CSS, and JavaScript with focus on mobile-friendly UI/UX and menu browsing.

Banking System (Java + JavaFX)

- Developed core banking functionalities with an interactive desktop GUI using Java and JavaFX/Swing.

Government Website Vulnerability Assessment

- Identified and reported multiple authentication vulnerabilities (CWE-287) in government websites with actionable remediation recommendations.

Autonomous Drone Navigation using DQN

- Built an AI-based drone navigation system using Python, TensorFlow, FastAPI, and Flutter with deployed backend and Android APK integration.

Spam Email Detection using NLP

- Implemented an NLP-based spam email classifier using Naive Bayes, TF-IDF, FastAPI backend, and Flutter mobile application.

Education

B.Tech in Computer Engineering <i>Vishwakarma University</i>	2025 <i>CGPA: 7.15</i>
12th Science (HSC) <i>MIT ADT, Pune</i>	2021 <i>75%</i>
10th (CBSE) <i>Billimoria High School</i>	2019 <i>60%</i>

Certifications

- Java Full Stack Course – June 2024
- Software Development Fundamentals – April 2024
- Supply Chain Management Certification – April 2024
- Published Research Paper: IoT-Based Data Logging System Using Cloud

Achievements

- Official acknowledgment from Government of India for reporting CWE-287 authentication vulnerabilities.
- Published research paper on IoT-Based Data Logging System Using Cloud.
